raml - Control over the memory limit of Rhino5 - .mod file . e7e1c3754c3a7ab1350b9c642853a5cd6c23c5c5 In 2016, the user made available a .msi package on GitHub for Rhino 5. (Can be used in the same way as the 7.0 version.) - ykim rhino 5.0 is NOT released yet. I have also found an installation package for Rhino 5 at the Rhino 5 Web page, but it is currently only available as a zip file. [1] The zip contains a .msi file, and is called rhinomc\_5.msi. In the zip, the .msi file has a .setup file that contains a .rar archive called version\_5\_setting. I have also found an installation package for Rhino 5 at the Rhino 5 Web page, but it is currently only available as a zip file. [1] The zip contains a .msi file, and is called rhinomc\_5.msi. I use the version 5 setup installer on my 64-bit Windows 7 laptop and it works without problem, except for one thing: whenever I start it, it tells me

that it can't find module.xml. But I have unzipped the executable from my version 5 zip, and here I can see the file module.xml, in the same folder where the setup file is, which tells me that it is missing. And since the setup program is supposed to make some modification to the Windows registry, it tells me that the file regedit.exe is missing. How can I install this version of Rhino 5 on my laptop? Or is there any other way to make it work, as the installation manual does not really explain anything. kim [1]
